APPENDIX I	Historical Background	79
APPENDIX II	Concepts and Definitions	81-83
APPENDIX III	The Questionnaire	85-108

## FOREWORD

The Labour Force Report is one of the most widely used publications of the Department of Statistics. It is used extensively by a wide cross section of the population; in particular other government agencies, secondary and tertiary students, media houses, researchers and private companies, as well as regional and international agencies.

Details on the survey's sample design along with concepts, definitions and methodology are presented in this report. Additionally, a brief note on the reliability of the data and their salient features are also included.

The report provides statistical summaries comprising tables and charts that show Labour Force components and characteristics of the Employed and Unemployed.

The Labour Force Section was responsible for the collection, data processing, tabulation and analysis. All these contributions are gratefully acknowledged.

A handwritten signature in dark ink, appearing to read 'L. W. D.', followed by a long, sweeping horizontal flourish that ends in a small upward tick.

Acting Director of Statistics

## **ACKNOWLEDGEMENTS**

The Department of Statistics wishes to thank the Bahamian public for the cooperation received throughout the year and looks forward to their continued support in the future.

The Department also wishes to record the contribution of its staff in the development, preparation and publication of this Report. This includes staff of the Department and temporary staff hired to assist with the exercise of data collection. Special thanks to the staff of The Labour Force section, namely Erica Francis, Kenneth Storr, Clarence Carey, Jean Hepburn-Rolle, Juliette Hutchinson, Kayla Armbrister, Martha Missick, Nicole Brown and Betty Stubbs for their invaluable contribution.

The analysis was done by Cypreanna Winters under the supervision of Leona Wilson, Acting Director.

## HIGHLIGHTS FROM THE MAY 2016 LABOUR FORCE AND HOUSEHOLD INCOME SURVEY

	<b>2015Nov</b>	<b>2016May</b>
Unemployment Rate	14.8 %	12.7%
Unemployment Rate (Women)	17.0%	14.5%
Unemployment Rate (Men)	12.7%	11.1%
Youth Unemployment Rate	30.0%	25.8%
Labour Force Participation Rate	75.6 %	76.90%

- ✓ Since November 2015, there was a 7% increase of own account workers (self-employed persons)
- ✓ Twenty-four percent (24%) of the Labour Force was made up of persons between the ages of 25 - 34 years.
- ✓ Twenty-one percent (21%) of unemployed persons were between the ages of 20-24.
- ✓ Sixty-two percent (62%) of the Employed Labour Force was engaged by the private sector.
- ✓ Approximately twelve percent (12%) of the Employed Labour Force was Non-Bahamian.

- ✓ Influenced by Carnival related activities, since last November employment in the “Manufacturing” sector increased by 26%. This sector accounts for 4% of total employment.
  
- ✓ The “Community, Social and Personal Service” industry, which includes the civil service, police service and domestic service continued to be the country’s largest employer in 2016 and accounted for 36% of the workforce.
  
- ✓ The Average Household Income was B\$37,716.
  
- ✓ The number of private households in The Bahamas was estimated to be 111,150, 100,890 of these households provided information and of this number 61% were headed by men.

## **OUTLINE OF THE LABOUR FORCE SURVEY**

### **PURPOSE**

The primary objective of the Labour Force Survey (LFS) of The Bahamas is to provide up-to-date information on the Labour force size and characteristics on an annual basis.

## **2. SAMPLE DESIGN, FIELD PROCEDURES AND ESTIMATION PROCESSES OF THE 2016 SURVEY**

### **2.1 SAMPLE DESIGN**

In general the LFS sample is drawn from New Providence, Grand Bahama and most recently Abaco and two or three additional Family Islands. The Family Islands covered in each cycle of the LFS are rotated in and out of sample to ensure that over time the more populated islands are represented directly. In 2016, Cat Island, Eleuthera and Acklins Island remained in the sample and will be rotated out in the 2017 round.

The Department utilizes a multi-stage-stratified design in which each selected island forms a stratum. Each stratum contains a number of supervisory districts, which correspond to the political constituencies, as they existed in 2000. All supervisory districts are represented in the sample. The supervisory districts are further subdivided into enumeration districts. The number of enumeration districts depends on the number of households in the supervisory district as each enumeration area comprises about 150 households. In turn, enumeration districts (ED's) are selected at random based on the size of the supervisory district relative to the stratum. Finally, households within the selected ED's are selected randomly.

The 2016 sample included 2,500 private households in New Providence, Grand Bahama, Abaco, Eleuthera, Cat Island and Acklins. All persons 15 years of age and over within these households who were usual residents were interviewed.

## **2.2 FIELD OPERATIONS**

In practice, the survey includes two phases of fieldwork. In the first phase all the households in the selected enumeration districts are listed. This procedure takes approximately four (4) months. The second phase, which usually occurs in May, consists of enumerating randomly selected households from the lists of households of the enumeration districts. Administrative field checks usually last for four weeks after the enumeration.

## **2.3 METHOD OF DATA COLLECTION**

Data for the labour force are collected by personal interview, usually with the head or other responsible member of the household. Every year approximately ninety-five enumerators and twenty supervisors are recruited to complete the task.

## **2.4 ESTIMATION PROCEDURES**

Information from individuals and households with like characteristics are weighted-up to produce separate population estimates by sex based on the population ratio estimation method. In the estimating procedure the estimates of the total Non-Institutional Population 15 years old and over is used to blow up the sample estimates. Separate raising factors are calculated for males and females using the formula:

$$\frac{P_i}{p_i}$$

Where  $P_i$  is the estimated total population 15 years and over and  $p_i$  is the sample population 15 years and over.

### **3. RELIABILITY OF DATA**

The estimates in this report are based on information collected in the 2016 sample survey carried out in New Providence, Grand Bahama, Abaco, Cat Island, Eleuthera and Acklins. These estimates are prone to sampling errors and therefore are subjected to statistical tests, which help in ascertaining the reliability of the data.

The absolute value of the standard error and its value in relation to the magnitude of the statistics (proportion in this instance) being estimated should be cited. For this purpose, the standard error can be expressed as a proportion (percent) of the value being estimated. This is called the relative error or coefficient of variation. Therefore, when using data, comparisons of the larger estimates may be used with confidence but smaller estimates should be regarded with caution. For instance, small differences from one period to another may be due only to sampling error. For this reason, comparison of particular variables from one survey to another should be used cautiously and should be regarded only as a guideline for ascertaining general trends.

This is an inevitable limitation of data obtained by sampling, and consequently, restricts the detailed cross-classifications that can be attempted. Detailed cross-classification or detailed information for very small areas can be best obtained from a Census.

At the 95% level of confidence the standard error, relative error and margin of error for the estimate of the number of unemployed persons are as follows:

	<b>STANDARD ERROR</b>	<b>RELATIVE ERROR</b>	<b>MARGIN OF ERROR</b>
<b>ALL BAHAMAS</b>	<b><math>\pm 0.66</math> %</b>	<b><math>\pm 5.10</math>%</b>	<b><math>\pm 1.25</math> %</b>
<b>NEW PROVIDENCE</b>	<b><math>\pm 0.87</math> %</b>	<b><math>\pm 6.08</math> %</b>	<b><math>\pm 1.53</math>%</b>
<b>GRAND BAHAMA</b>	<b><math>\pm 2.05</math> %</b>	<b><math>\pm 22.25</math>%</b>	<b><math>\pm 4.40</math> %</b>
<b>ABACO</b>	<b><math>\pm 0.88</math> %</b>	<b><math>\pm 4.7</math>%</b>	<b><math>\pm 1.40</math> %</b>
<b>ELEUTHERA</b>	<b><math>\pm 0.57</math> %</b>	<b><math>\pm 0.441</math>%</b>	<b><math>\pm 5.57</math> %</b>
<b>CAT ISLAND</b>	<b><math>\pm 0.59</math>%</b>	<b><math>\pm 0.53</math>%</b>	<b><math>\pm 1.33</math>%</b>
<b>ACKLINS</b>	<b><math>\pm 0.54</math>%</b>	<b><math>\pm 0.57</math>%</b>	<b><math>\pm 1.60</math> %</b>

## **APPENDIX I - HISTORICAL BACKGROUND**

## **HISTORICAL BACKGROUND**

In 1973, the Department of Statistics (DOS) introduced the first Household Survey. It was designed to collect data on the Labour Force as well as Household Income. The survey was conducted biennially until 1979, after which there was a break in the series. The survey was revived in 1986 and since 1988 has been conducted annually except in census years.

In 1991, a Rotational Sample Survey was introduced and since the 2000 Census a new design was implemented. The early surveys covered New Providence, Grand Bahama and six of the Family Islands. This coverage proved costly and was also difficult to manage. Results, from the latest Census indicated that New Providence and Grand Bahama accounted for approximately 85% of both population and dwellings in The Bahamas. Therefore, the new sample design has New Providence and Grand Bahama sampled annually with the remaining islands sampled on a rotation basis.

## **APPENDIX II - CONCEPTS AND DEFINITIONS**

## **CONCEPTS AND DEFINITIONS**

### **REFERENCE WEEK**

In 2016, the enumeration began on May 2<sup>nd</sup> and continued until the end of May. The week proceeding this period, April 25 to May 1<sup>st</sup>, was the reference week. All data collected referred to economic activity during that seven-day period.

### **PRIVATE HOUSEHOLD**

A private household is defined as a person or group of persons who live together and who collectively make provision for sustenance, budgeting and other essentials for living.

Any one of the following may constitute a household:

- i) a family with or without lodgers or servants.
- ii) a person living alone.
- iii) a group of unrelated persons living together.

### **HEAD OF HOUSEHOLD**

The head of the household is that person who is acknowledged as such by the other members. This is usually but not necessarily, the person who bears the chief responsibility for the economic maintenance of the household.

### **HOUSEHOLD INCOME**

This is the total annual receipts of personal incomes of all persons in the household and includes payments for production, such as wages and salaries, income from self-employment and earned rent, dividends and interest receipts.

### **AGE**

Age refers to age at last birthday in years

### **MARITAL STATUS**

This refers to the personal status of each individual in relation to the marriage laws, or customs of The Bahamas. Marital status categories are as follows:

- i) single(never married)
- ii) married(legally)
- iii) common-law
- iv) other

## **THE LABOUR FORCE/ ECONOMICALLY ACTIVE POPULATION**

The labour force is that segment of the population, fifteen years of age and over, engaged in or willing and able to be engaged in the production of goods and services. It is composed of those persons with jobs- the Employed, and those without jobs but who were engaged in some job-seeking activity- the Unemployed.

## **THE EMPLOYED POPULATION**

This includes:

- i) all persons 15 years of age and over who worked for pay any time during the reference week or who worked without pay for at least one hour in a family-operated enterprise.
- ii) Persons who were temporarily absent from their regular jobs because of vacation, illness, inclement weather, or similar reasons.

## **THE UNEMPLOYED POPULATION**

The unemployed population incorporates persons 15 years of age and over who did not work or have a job from which they were temporarily absent during the reference week, but were actively looking for work in the four weeks prior to the survey week and were able and willing to work. Persons who did not look for work because they were on layoff or waiting to start a new job within the following 30 days were also counted among the unemployed.

## **THE UNEMPLOYMENT RATE**

Represents the number of persons unemployed as a percentage of the labour force.

## **THE LABOUR FORCE PARTICIPATION RATE**

The percentage of the population 15 years of age and over that is in the labour force (people who work or are looking for work).

## **EMPLOYMENT STATUS**

Classifies persons as follows:

- i) Government Employees- individuals who work for a government department or corporation.
- ii) Private Employees- individuals who work for a private business.
- iii) Self-Employed Persons – persons who operate their own business, with or without paid help.
- iv) Unpaid Family Workers- persons who work in family enterprises, without pay, for at least one hour during the reference week.

## **OCCUPATION**

This refers to the type of work actually performed by individuals. Classification is according to the International Standard Classification of Occupations (ISCO).

## **INDUSTRY**

The industry in which individuals are classified relates to the main type of economic activity carried on by the firms or business in which they are employed. Classification is based on the International Standard Industrial Classification of all Economic Activities (ISIC).

## **PART-TIME WORKERS**

For the purposes of the survey, part-time workers were determined subjectively (an individual's own assessment). To obtain this information employed persons were asked, "Do you work full-time or part-time?"

## **DISCOURAGED WORKERS**

These are persons who may or may not have worked before, are able and willing to work, but are not actively seeking work because they believe they would not find work. Because they were not seeking work during the four weeks preceding the date of enumeration they were not counted among the unemployed and are therefore, not a part of the labour force.
